

Troubleshooting Guide

Common Issues & Resolutions for NovaSuite

NovaTech Solutions Inc. — Customer Support Knowledge Base

v1.0 | 2025 | Internal Use

Before You Begin

Before troubleshooting, always check the NovaTech Status Page at status.novatech.io for any active incidents or scheduled maintenance. Most transient errors resolve automatically once an incident is resolved.

1. Login & Authentication Issues

Cannot log in — 'Invalid credentials' error

- Verify the correct email (check for typos or alias differences).
- Use the 'Forgot Password' link to reset. Check spam for the reset email.
- Clear browser cache and cookies, then retry.
- If SSO is enabled, confirm your IdP session is active (e.g., Okta, Azure AD).
- Contact your Admin to confirm your account is active and not locked.

MFA code not accepted

- Ensure your device clock is synced (TOTP is time-sensitive; drift > 30s causes failures).
- On iOS/Android: Settings > General > Date & Time > Set Automatically.
- If using a backup code, ensure it hasn't been previously used.
- Admins can reset MFA for a user from Admin Console > Users > [User] > Security.

SSO redirect fails or loops

- Verify the ACS URL and Entity ID in your IdP match the values in NovaTech's SSO settings.
- Check that your IdP certificate has not expired.
- Disable browser extensions (especially ad blockers) and retry in incognito mode.
- Review SSO debug logs in Admin Console > Security > SSO Logs.

2. Performance & Loading Issues

Dashboard loads slowly or times out

- Run a speed test at fast.com. NovaSuite requires a minimum 10 Mbps connection.
- Reduce the date range on dashboard widgets — large ranges (>12 months) increase query time.
- Clear browser cache. In Chrome: Ctrl+Shift+Delete > Cached images and files.
- Try a different browser. NovaSuite officially supports Chrome 110+, Edge 110+, Firefox 115+.
- Disable browser extensions and hardware acceleration temporarily.

Reports take too long to generate

- Break large reports into smaller time segments.
- Use the 'Schedule Report' feature to run heavy reports off-peak (midnight–6 AM local).
- Check if your plan includes enhanced compute. Upgrade to Enterprise for priority query processing.
- Contact support with the Report ID visible in the loading spinner for diagnostics.

File uploads fail or are very slow

- Maximum file size is 500 MB per file and 5 GB per session.
- Supported formats: PDF, XLSX, CSV, DOCX, PNG, JPG, MP4, ZIP.
- Check available storage in Settings > Organisation > Storage.
- Use the chunked upload API for files over 100 MB to avoid browser timeout issues.

3. Integration & API Issues

Webhook events not being received

- Verify the endpoint URL in Settings > Integrations > Webhooks is publicly reachable.
- Check that your server responds with HTTP 200 within 5 seconds; otherwise retries occur.
- Review the Webhook Delivery Log for error responses (Settings > Integrations > Logs).
- Whitelist NovaTech's outbound IP ranges: 52.14.0.0/16 and 18.218.0.0/16.

API returns 401 Unauthorized

- Ensure the API key is active (Settings > API Keys). Regenerate if it has expired.
- Confirm the Authorization header format: 'Authorization: Bearer YOUR_API_KEY'.
- Check that the API key has the required scopes for the endpoint being called.
- IP allowlisting: if enabled on your account, verify the caller's IP is whitelisted.

Salesforce / HubSpot sync stopped working

- Re-authenticate the integration (Settings > Integrations > [Provider] > Reconnect).
- Check if the connected OAuth token has expired or been revoked in the provider.
- Review the sync error log for field mapping conflicts.
- Ensure the connected CRM user account has API access permissions.

4. Error Code Reference

Error Code	Meaning	Action
NS-1001	Session expired	Re-login
NS-1002	Insufficient permissions	Contact Admin for role adjustment
NS-1010	MFA verification failed	Sync device clock; retry
NS-2001	Database timeout	Retry; if persistent, contact support
NS-2010	Storage quota exceeded	Archive or delete files; upgrade plan
NS-3001	API rate limit reached	Reduce request frequency; check quota
NS-3005	Invalid API payload	Check API docs for correct schema
NS-4001	Integration auth failure	Re-authenticate integration
NS-5001	Report generation failed	Narrow parameters; retry
NS-9000	Unknown internal error	Contact support with error ID

If your issue is not listed here, open a support ticket at support.novatech.io or email support@novatech.io. Include your Account ID, browser, OS, and a screenshot or screen recording for faster resolution.
